

LAUNDRY JET

iSense Automatic Port LP

The Laundry Jet iSense Port LP (low profile) is our latest automatic port design. It is the automatic version of the Slide Port, retaining the functionality and style of the Laundry Jet brand but with a sleek, lower profile finish which matches seamlessly with modern wall designs. It provides the simplest, easy to use, auto open functionality in our range. Constructed in a durable, HI-Gloss finish the iSense Port is simply mounted by screws, to the wall kit. It is opened by just a double wave of the hand and closes automatically after the systems 15-20 second timed cycle. It can be installed in 3 different orientations depending on your desired location giving maximum flexibility. For example, you can install it to open to the left because of a door jam on the right and vice a versa, including vertical if required for maximum design and installation flexibility. Once opened, the dirty laundry, bed sheets and even damp towels are simply fed into the now open port and drawn away to the laundry room. Walk away and let the auto-close feature automatically close the port door when the cycle ends.

Tech Data

Auto opening with double wave of the hand

White plastic high gloss finish.

Cat 5 cable and later

RJ 45 connectors

24 volt

Low profile

Speed approx. 35-40 mph
